

Parts of a Computer - Recap

Chapter 1: Parts of a Computer - Recap · Topic 1

Key Concept

The monitor displays what the computer is doing, the CPU processes information, and the keyboard and mouse let us give instructions to the computer.

Together, these parts form a complete computer system that helps us type, click, see, and complete our tasks.

We also use additional parts sometimes, like speakers to hear sound or a printer to print our work on paper.

Understanding how each part works helps us use computers more confidently and take better care of them.

Quick Revision Notes

- Computer parts include monitor, keyboard, mouse and CPU.
- The monitor displays information.
- The CPU processes information.
- The keyboard and mouse let us give instructions.
- These parts form a complete computer system.
- Speakers help us hear sound.
- A printer helps us print work.
- Understanding parts helps us use computers well.

Practice Questions

- 1 Label a diagram of computer parts.
- 2 Discuss what each part does.
- 3 Name an extra part like speakers or a printer.
- 4 Practice pointing to each part on a real computer.
- 5 Discuss why we should take care of computer parts.
- 6 Draw a computer with all its parts labelled.
