

Numbers up to 10,000

Chapter 1: Numbers up to 10,000 · Topic 1

Key Concept

A four-digit number, like 3,456, has a thousands digit, a hundreds digit, a tens digit, and a ones digit.

In 3,456, the 3 represents 3,000, the 4 represents 400, the 5 represents 50, and the 6 represents 6.

We compare four-digit numbers by looking at the thousands digit first, then hundreds, tens, and ones.

Practising numbers up to 10,000 helps us understand larger quantities and prepares us for bigger calculations.

Quick Revision Notes

- Numbers up to 10,000 have thousands, hundreds, tens and ones.
- 3,456 has 3 thousands, 4 hundreds, 5 tens, 6 ones.
- 3 represents 3000, 4 represents 400.
- 5 represents 50, 6 represents 6.
- We compare thousands digit first.
- Then hundreds, tens and ones.
- This helps understand larger quantities.
- 10,000 is the highest number in this range.

Practice Questions

- 1 Write the place value of each digit in 6,789.
- 2 Compare 5,678 and 5,687.
- 3 Count in thousands from 1,000 to 10,000.
- 4 Write five four-digit numbers in order.
- 5 Identify thousands, hundreds, tens, ones in 2,345.
- 6 Practice writing numbers from 9,990 to 10,000.
