

# Sharing Equally

Chapter 7: Rani's Gift · Topic 2

---

## Key Concept

If we have 12 sweets and want to share them equally among 3 friends, each friend gets 4 sweets (12 shared among 3 equals 4 each).

To share equally, we can give one item at a time to each person in turn, going around until all items are given out, making sure everyone ends up with the same number.

Sometimes, sharing equally doesn't work out perfectly, and there may be some items left over that cannot be shared equally - this is an early introduction to the idea of remainders.

Sharing equally is an important life skill, useful when dividing snacks, toys, or tasks fairly among friends or family members.

## Quick Revision Notes

- Sharing equally means everyone gets the same amount.
- 12 sweets shared among 3 friends gives 4 each.
- We can share by giving one item at a time in turn.
- Sometimes items are left over when sharing equally.
- Leftover items are an early idea of remainders.
- Sharing equally is an important life skill.
- This skill helps with dividing snacks or toys fairly.
- Sharing connects to the idea of division.

## Practice Questions

- 1 Share 8 candies equally among 2 friends.
- 2 Share 15 pencils equally among 3 classmates.
- 3 Try sharing 10 items among 3 people and see if any are left over.
- 4 Draw a picture showing equal sharing.
- 5 Practice sharing your snack equally with a sibling.
- 6 Solve: Share 20 stickers equally among 4 friends.
