

Multiplication Tables

Chapter 3: Multiplication Tables · Topic 1

Key Concept

Multiplication tables show the result of multiplying a number by 1 through 10, like the table of 3: 3,6,9,12...30.

Memorising multiplication tables helps us solve multiplication and division problems more quickly without repeated addition.

We can use patterns in tables to help memorise them, like the table of 5 always ending in 0 or 5.

Practising tables regularly through repetition and practice problems builds strong number sense and speed in calculations.

Quick Revision Notes

- Tables show results of multiplying by 1-10.
- Example: table of 3 = 3,6,9,12...30.
- Memorising tables speeds up multiplication.
- It also helps with division problems.
- Patterns help memorise tables.
- Table of 5 always ends in 0 or 5.
- Regular practice builds number sense.
- It also builds calculation speed.

Practice Questions

- 1 Recite the table of 3.
- 2 Recite the table of 5.
- 3 Solve 6×7 .
- 4 Solve 8×4 .
- 5 Find the pattern in the table of 9.
- 6 Practice the table of 10.
