

Practice and Revision - Money - Counting Coins and Notes

Chapter 8: Money - Counting Coins and Notes · Topic 2

Key Concept

Coins come in values like 1, 2, 5, and 10 rupees, while notes come in larger values like 10, 20, 50, and 100 rupees.

To find the total money we have, we add up the value of all our coins and notes together.

We use money to buy things we need, and it's important to count correctly so we don't pay too much or too little.

Saving money by not spending everything helps us buy bigger things later, an important habit to learn early.

Quick Revision Notes

- Coins have values like 1, 2, 5 and 10 rupees.
- Notes have values like 10, 20, 50 and 100 rupees.
- We add coin and note values to find the total.
- We use money to buy things we need.
- Counting correctly avoids paying too much or too little.
- Saving money helps us buy bigger things later.
- Saving is an important habit.
- Learning about money helps us in daily life.

Practice Questions

- 1 Add the value of five coins.
- 2 Practice counting a mix of coins and notes.
- 3 Discuss something you'd like to save money to buy.
- 4 Sort coins and notes by value.
- 5 Calculate the total of 2 coins and 1 note.
- 6 Discuss why saving money is a good habit.
