

Changes in Our Surroundings

Chapter 11: Changes in Our Surroundings · Topic 1

Key Concept

Natural changes, like seasons changing or trees growing, happen without human involvement, following natural cycles.

Human activities, like building new roads, houses, or factories, can cause significant changes to our surroundings.

Some changes are positive, like new parks or schools, while others, like pollution or deforestation, can be harmful.

Observing and understanding changes in our surroundings helps us appreciate growth and make responsible choices for the future.

Quick Revision Notes

- Natural changes: seasons, tree growth.
- These happen without human involvement.
- Human activities cause changes too.
- Examples: new roads, houses, factories.
- Some changes are positive (parks, schools).
- Others are harmful (pollution, deforestation).
- Understanding change helps us adapt.
- It helps us make responsible choices.

Practice Questions

- 1 Discuss a natural change you have observed.
- 2 Discuss a human-caused change in your area.
- 3 Draw a before-and-after picture of a changing place.
- 4 Discuss one positive and one harmful change.
- 5 Talk about how seasons change your surroundings.
- 6 Discuss how we can make positive changes.
