

Plants Around Us

Chapter 3: Plants Around Us · Topic 1

Key Concept

Plants have roots, stems, leaves, and sometimes flowers and fruits, each part serving an important purpose for the plant.

Plants need sunlight, water, air, and soil to grow healthy and strong, just like we need food and water.

We get many useful things from plants, like fruits, vegetables, flowers, and even the paper we write on.

We should take care of plants by watering them and not harming them, since they give us oxygen to breathe.

Quick Revision Notes

- Plant parts: roots, stems, leaves, flowers, fruits.
- Each part serves a purpose.
- Plants need sunlight, water, air, soil.
- This helps them grow healthy.
- Plants give us fruits, vegetables, flowers.
- Paper also comes from plants.
- We should water and care for plants.
- Plants give us oxygen to breathe.

Practice Questions

- 1 Draw a plant and label its parts.
- 2 Name three things plants give us.
- 3 Discuss why plants need sunlight.
- 4 Talk about how you can care for a plant.
- 5 Draw your favourite fruit or vegetable plant.
- 6 List two things we get from plants.
