

Reading and Understanding 'Anandi's Rainbow'

Chapter 9: Anandi's Rainbow · Topic 1

Key Concept

Anandi wonders about rainbows and discovers that a rainbow has many colours appearing together in the sky after rain, when sunlight passes through raindrops.

Through her curiosity, Anandi learns to notice and name the colours she sees, like red, orange, yellow, green, blue, and violet, appreciating the beauty of nature.

The story shows how being curious and asking questions, like Anandi did, can help us learn new and interesting things about the world.

Anandi's excitement about the rainbow also reminds us to pause and appreciate small, beautiful moments in nature that we might otherwise overlook.

Quick Revision Notes

- Anandi is curious about rainbows.
- A rainbow appears in the sky after rain.
- Sunlight passing through raindrops creates a rainbow.
- A rainbow has many colours, like red, yellow, green and blue.
- Being curious helps us learn new things.
- Asking questions is a good way to learn.
- Anandi's excitement shows appreciation of nature.
- We should notice small, beautiful moments in nature.

Practice Questions

- 1 Name three colours you might see in a rainbow.
- 2 Draw a rainbow and colour it.
- 3 Talk about a time you saw a rainbow.
- 4 Explain in your own words how a rainbow forms.
- 5 Ask a curious question about something in nature, like Anandi did.
- 6 Discuss one beautiful thing in nature you noticed recently.
