

Introduction to the Internet

Chapter 3: Introduction to the Internet · Topic 1

Key Concept

The internet connects millions of computers around the world, allowing us to send messages, browse websites, and share information instantly.

A web browser is a program we use to visit websites, like searching for information or watching videos online.

The internet lets us communicate through email, messaging apps, and video calls with people far away.

While the internet is very useful, we should use it safely, avoiding sharing personal information with strangers online.

Quick Revision Notes

- The internet connects computers worldwide.
- It lets us send messages and browse websites.
- A web browser lets us visit websites.
- We use browsers to search and watch videos.
- The internet enables email and video calls.
- It connects us with people far away.
- We should use the internet safely.
- We should avoid sharing personal information with strangers.

Practice Questions

- 1 Discuss how you use the internet at home or school.
- 2 Name a web browser you know.
- 3 Discuss why we should protect personal information online.
- 4 List three things you can do using the internet.
- 5 Talk about a safe way to search for information.
- 6 Discuss a rule for staying safe online.
