

Plants Around Us

Chapter 5: Plants Around Us · Topic 1

Key Concept

Plants have different parts - roots, stem, leaves, flowers, and fruits - each doing an important job for the plant.

Roots hold the plant in the soil and take in water, while leaves use sunlight to make food for the plant.

Plants give us fruits and vegetables to eat, and they also give us the oxygen we breathe.

We should take care of plants by watering them and not damaging trees and flowers around us.

Quick Revision Notes

- Plants are living things that need sunlight, water and air.
- Plant parts include roots, stem, leaves, flowers and fruits.
- Roots hold the plant and take in water.
- Leaves use sunlight to make food.
- Plants give us fruits and vegetables to eat.
- Plants give us oxygen to breathe.
- We should water plants to care for them.
- We should not damage trees and flowers.

Practice Questions

- 1 Draw a plant and label its parts.
- 2 Water a plant at home and observe it.
- 3 Name three fruits or vegetables plants give us.
- 4 Discuss why plants need sunlight.
- 5 Find a plant near your home and describe it.
- 6 Talk about why we shouldn't damage trees.
