

Topic 2: (Bar Graph)

2: · Topic 2

Key Concept

Bar graphs are used to represent data in a pictorial way. They are easy to understand and interpret.

A bar graph has two main parts: the x-axis (horizontal) and the y-axis (vertical).

The x-axis is used to label the categories or groups being compared. The y-axis is used to show the frequency or count of each category.

Each bar represents a category, and the height of the bar shows the value for that category.

Quick Revision Notes

- Bar graphs are used to represent data in a pictorial way.
- They are easy to understand and interpret.
- The x-axis is used to label the categories or groups being compared.
- The y-axis is used to show the frequency or count of each category.
- Each bar represents a category, and the height of the bar shows the value for that category.
- Bar graphs are used to compare data across different categories.
- They are used to show the distribution of data.
- Bar graphs are used to represent data in a clear and concise manner.

Practice Questions

- Draw a bar graph showing the number of students in each class.
- Draw a bar graph showing the number of books read by each student.
- Draw a bar graph showing the number of fruits in each basket.
- Draw a bar graph showing the number of flowers in each garden.
- Draw a bar graph showing the number of animals in each enclosure.
- Draw a bar graph showing the number of plants in each field.
