Key Concept

[illegible][illegible]

1. 2019年12月31日，公司应收账款账面余额为1,000,000.00元，坏账准备余额为100,000.00元，计提比例为10%。

THE UNIVERSITY OF CHICAGO

Quick Revision Notes

- **QUESTION:** What is the purpose of the `__init__` method?
- **ANSWER:** The `__init__` method is used to initialize the attributes of a class.
- **QUESTION:** How do you create a class in Python?
- **ANSWER:** You create a class by using the `class` keyword followed by the class name and a colon.
- **QUESTION:** What is the difference between a class and an object?
- **ANSWER:** A class is a blueprint for creating objects. An object is an instance of a class.
- **QUESTION:** How do you access attributes of a class?
- **ANSWER:** You access attributes of a class by using the `dot` notation.
- **QUESTION:** What is the difference between a class attribute and an instance attribute?
- **ANSWER:** A class attribute is shared by all instances of a class, while an instance attribute is unique to each instance.
- **QUESTION:** How do you create a method in a class?
- **ANSWER:** You create a method in a class by defining a function inside the class.
- **QUESTION:** What is the difference between a class method and an instance method?
- **ANSWER:** A class method is a method that is bound to the class, while an instance method is a method that is bound to an instance of the class.
