Practice Questions

1. **Identify the problem.** The first step is to identify the problem or issue that needs to be addressed. This involves gathering information and understanding the context of the problem.
2. **Define the objectives.** Once the problem is identified, the next step is to define the objectives or goals that need to be achieved. This helps in focusing the efforts and resources.
3. **Develop a plan.** A plan is then developed to outline the steps and actions required to achieve the objectives. This includes identifying resources, setting timelines, and assigning responsibilities.
4. **Implement the plan.** The plan is then implemented, and the actions are carried out. This involves monitoring progress and making adjustments as needed.
5. **Evaluate the results.** After implementation, the results are evaluated to determine if the objectives have been achieved. This involves comparing the actual outcomes with the expected outcomes.
6. **Reflect and learn.** Finally, the process is reflected upon to learn from the experience. This involves identifying what worked well, what didn't, and how to improve for the future.
