

Shapes Around Us

Chapter 4: Shapes Around Us · Topic 1

Key Concept

A circle is perfectly round with no corners, like a ball or a wheel, while a square has four equal sides and four corners.

A triangle has three sides and three corners, and a rectangle has four sides with opposite sides equal in length.

We can find these shapes all around us - in toys, buildings, food items, and many everyday objects.

Learning to identify shapes helps us understand the world around us and prepares us for more advanced geometry later.

Quick Revision Notes

- A circle is round with no corners.
- A square has 4 equal sides, 4 corners.
- A triangle has 3 sides, 3 corners.
- A rectangle has 4 sides, opposite sides equal.
- Shapes are found in toys, buildings, food.
- They are all around us.
- Identifying shapes helps understand the world.
- It prepares us for advanced geometry.

Practice Questions

- 1 Draw a circle, square, triangle, and rectangle.
- 2 Find and name three shapes around your house.
- 3 Count the sides of a triangle.
- 4 Discuss the difference between a square and rectangle.
- 5 Draw a picture using different shapes.
- 6 Name an object shaped like a circle.
