

Computer Lab Rules and Safety

Chapter 3: Computer Lab Rules and Safety · Topic 1

Key Concept

We should always wash our hands before using the computer and avoid eating or drinking near it to keep it clean.

We should sit properly with good posture, keeping our eyes at a safe distance from the screen to protect our eyes.

We should never pull cables, force keys, or spill liquids near the computer, as this can damage the equipment.

We should always ask a teacher for help if something goes wrong, rather than trying to fix the computer ourselves.

Quick Revision Notes

- We should wash hands before using the computer.
- We should avoid eating or drinking near computers.
- We should sit with good posture.
- We should keep eyes at a safe distance from the screen.
- We should never pull cables or force keys.
- We should never spill liquids near computers.
- We should ask a teacher for help if something goes wrong.
- Following rules keeps us and computers safe.

Practice Questions

- 1 List three computer lab safety rules.
- 2 Discuss why we shouldn't eat near a computer.
- 3 Practice sitting with good posture at a desk.
- 4 Talk about what to do if a computer isn't working.
- 5 Draw a poster showing computer lab rules.
- 6 Discuss why washing hands before typing matters.
