

Practice and Revision - Numbers up to 1000

Chapter 1: Numbers up to 1000 · Topic 2

Key Concept

A three-digit number, like 342, has a hundreds digit, a tens digit, and a ones digit, each showing a different value.

In 342, the 3 represents 3 hundreds (300), the 4 represents 4 tens (40), and the 2 represents 2 ones.

We can compare numbers up to 1000 by looking at their hundreds digit first, then tens, then ones.

Practising reading, writing, and comparing numbers up to 1000 helps strengthen our understanding of place value.

Quick Revision Notes

- Numbers up to 1000 have hundreds, tens and ones.
- 342 has 3 hundreds, 4 tens and 2 ones.
- 3 represents 300, 4 represents 40, 2 represents 2.
- We compare numbers by hundreds digit first.
- Then we compare tens, then ones.
- This helps us know which number is bigger.
- Practice strengthens place value understanding.
- 1000 is the highest number in this range.

Practice Questions

- 1 Write the place value of each digit in 567.
- 2 Compare 234 and 243, saying which is bigger.
- 3 Count in hundreds from 100 to 1000.
- 4 Write five three-digit numbers in order.
- 5 Identify the hundreds, tens and ones in 809.
- 6 Practice writing numbers from 990 to 1000.
