

Means of Transport

Chapter 5: Means of Transport · Topic 1

Key Concept

Land transport includes cars, buses, and trains, which travel on roads or railway tracks to carry people and goods.

Water transport includes boats and ships, which travel on rivers, lakes, and oceans to carry passengers and cargo.

Air transport includes airplanes and helicopters, which are the fastest way to travel long distances.

Choosing the right transport depends on factors like distance, cost, speed, and what we need to carry.

Quick Revision Notes

- Land transport includes cars, buses and trains.
- Land transport uses roads or railway tracks.
- Water transport includes boats and ships.
- Water transport travels on rivers, lakes and oceans.
- Air transport includes airplanes and helicopters.
- Air transport is the fastest way to travel long distances.
- We choose transport based on distance, cost and speed.
- Transport carries both people and goods.

Practice Questions

- 1 List three types of transport you've used.
- 2 Discuss the fastest way to travel to another city.
- 3 Draw a car, a ship and an airplane.
- 4 Talk about how goods reach a shop.
- 5 Compare land and water transport.
- 6 Discuss why airplanes are useful for long trips.
