

Sensory Organs

Chapter 11: Sensory Organs · Topic 1

Key Concept

Eyes help us see colours, shapes, and movement, while ears help us hear sounds like music, voices, and noises.

The nose helps us smell different scents, and the tongue helps us taste flavours like sweet, sour, salty, and bitter.

Skin is our largest sensory organ, helping us feel touch, temperature, and pain, protecting our body as well.

Taking care of our sensory organs, like protecting our eyes from bright light, helps keep them healthy and working well.

Quick Revision Notes

- Sensory organs: eyes, ears, nose, tongue, skin.
- Eyes see; ears hear.
- Nose smells; tongue tastes.
- Taste types: sweet, sour, salty, bitter.
- Skin feels touch, temperature, pain.
- Skin is our largest sensory organ.
- It also protects our body.
- We should care for our sensory organs.

Practice Questions

- 1 Name the five sensory organs and their functions.
- 2 Discuss how you would protect your eyes.
- 3 Try identifying an object by touch only.
- 4 Discuss your favourite smell and why.
- 5 List four different tastes you know.
- 6 Draw a face and label the sensory organs.
