

Human Resources in India

Chapter 5: Human Resources in India · Topic 1

Key Concept

India has a large and young population, offering significant potential for economic growth if properly educated and employed.

Human resource development involves investing in education, healthcare, and skill training to improve the productivity and wellbeing of the population.

India's workforce is distributed across agriculture, industry, and services, with varying levels of skill and productivity in each sector.

Challenges include unemployment, underemployment, and disparities in education and healthcare access across different regions.

Quick Revision Notes
