

Disaster Management

Chapter 9: Disaster Management · Topic 1

Key Concept

Preparedness involves planning ahead, including creating emergency kits, evacuation plans, and community awareness programs.

Response involves immediate actions during a disaster, including rescue operations, providing medical aid, and ensuring public safety.

Recovery involves rebuilding affected areas, providing long-term support to victims, and learning from the disaster to improve future preparedness.

Effective disaster management requires coordination between government agencies, communities, and individuals to reduce loss of life and property.

Quick Revision Notes

- Preparedness: planning ahead, emergency kits.
- Also evacuation plans, awareness programs.
- Response: immediate disaster actions.
- Includes rescue, medical aid, safety.
