

Our Environment

Chapter 1: Our Environment · Topic 1

Key Concept

The environment is made up of living things (plants, animals, people) and non-living things (air, water, soil, rocks) that surround us.

A healthy environment provides us with clean air to breathe, clean water to drink, and food to eat.

Human activities like cutting trees, polluting water, and littering can harm our environment and the creatures living in it.

We can protect our environment by planting trees, saving water, not littering, and reducing waste.

Quick Revision Notes

- Environment includes living and non-living things.
- Living: plants, animals, people.
- Non-living: air, water, soil, rocks.
- A healthy environment gives clean air, water, food.
- Human activities can harm the environment.
- Examples: cutting trees, polluting water.
- We can protect it by planting trees.
- Also by saving water and reducing waste.

Practice Questions

- 1 List three living things in your environment.
- 2 List three non-living things in your environment.
- 3 Discuss one way humans harm the environment.
- 4 Discuss one way you can help protect the environment.
- 5 Draw a picture of a healthy environment.
- 6 Plant a seed and observe its growth.
