

Our Environment and Cleanliness

Chapter 4: Our Environment and Cleanliness · Topic 1

Key Concept

A clean environment means clean air, water, and surroundings, free from litter, pollution, and waste.

We can keep our environment clean by throwing garbage in dustbins, not littering, and recycling things like paper and plastic.

A dirty environment can cause diseases and harm plants and animals, making it important for everyone to help keep it clean.

Small actions, like planting trees and picking up litter, can make a big difference in keeping our environment healthy.

Quick Revision Notes

- Our environment includes air, water, land, plants and animals.
- A clean environment is free from litter and pollution.
- We should throw garbage in dustbins.
- We should not litter.
- Recycling paper and plastic helps too.
- A dirty environment can cause diseases.
- Everyone should help keep the environment clean.
- Small actions like planting trees help a lot.

Practice Questions

- 1 List three ways to keep your environment clean.
- 2 Discuss what happens if we don't recycle.
- 3 Draw a clean park versus a dirty one.
- 4 Talk about a time you threw garbage in a dustbin.
- 5 Plan to plant a small plant or seed.
- 6 Discuss why pollution is harmful.
