

Key Concept

Quick Revision Notes

- ## Practice Questions

1. **Identify the problem.** The first step is to identify the problem or issue that needs to be addressed. This involves understanding the current situation, gathering relevant information, and defining the scope of the problem.
2. **Analyze the problem.** Once the problem is identified, the next step is to analyze it. This involves breaking down the problem into smaller, more manageable components and identifying the underlying causes.
3. **Generate solutions.** After analyzing the problem, the next step is to generate potential solutions. This involves brainstorming ideas, consulting with others, and evaluating different options.
4. **Implement the solution.** Once a solution has been chosen, the next step is to implement it. This involves developing a plan, allocating resources, and putting the plan into action.
5. **Evaluate the results.** After the solution has been implemented, the next step is to evaluate the results. This involves monitoring the progress, measuring the outcomes, and assessing the effectiveness of the solution.
6. **Communicate the results.** Finally, the results of the problem-solving process should be communicated to the relevant stakeholders. This involves sharing the findings, discussing the implications, and providing feedback.
